

## Satellite Tracking

### Live Satellite Tracking

We provide a simple and low cost system for the fleet manager and private owner who needs current information on their yachts' status.

A valuable tool for those yachts on delivery as well as those under management.

### Inmarsat

Our tracking system is provided through Emmi Network and utilises the Inmarsat satellite constellation. It is a simple and inexpensive method of remotely tracking your yacht, powerboat or rib, and displaying the information via the internet on your computer at home or office.

The system works with installation of a small onboard unit which is a combined Global Positioning System (GPS) and Inmarsat D+ transceiver.

The unit is small and compact enough to be installed discreetly, and in some circumstances can even be buried within the hull or deck fittings. The unit only requires 12/24 volt supply to begin operating.

### Internet Access

The information of your vessels position, speed and heading is transmitted back to the server. The information is then converted into a simple visual format and displayed on electronic charts. All you need is any computer with internet access to be able to view past voyages as well as the actual (live) position of your yacht.

### Peace of Mind

For those who frequently use their yacht for long journeys and are away from home for long periods, this system enables family and friends to regularly view your location instantly giving them peace of mind.

### Security

Not only does it offer the practical function of tracking your boat whether it has been stolen or simply being used for a long journey, it also offers the option of countless additional features for safety and monitoring of on-board functions.

The system can be purchased or supplied temporarily as an upgrade for yacht delivery.

Know the latest position,  
course and speed of your  
yacht via the Internet
